 t_{pHL} : The time between an input change and the corresponding output change when the output changes from HIGH to LOW.

 t_{pLH} : The time between an input change and the corresponding output change when the output changes from LOW to HIGH.

- ullet Note: t_p is measured from the 50% crossing of the input to the 50% crossing of the output
- t_f : Time between 90% of output high and 10% output low
- t_r : Time between 10% of output low and 10% output high
